                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT 12
US-09-328-352-5845
US-09-328-352-5845

Sequence 5845, Application US/09328352

Patent No. 656258

GENERAL INFCRMATION:

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER

TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC99-03PA.

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT FILING DATE: 1999-66-04

NUMBER OF SEQ ID NOS: 8252

the proteins, useful as vaccines for raising immune response in animals. Movel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding

Claim 1; Page 111-112; 127pp; English.

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastrilis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is

                  The present sequence is a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypetide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ArCC 5679) was determined from overlapping contigs generated by rechanically shearing the bacterial DNA. The sequences were analysed for OFF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in B. coli hosts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Transmembrane; cytoplasmic; cell envelope; flagella; transport; secreted; periplasmic; chronic gastritis; duodenal ulcer disease; activator; inhibitor; bacterial life cycle; vaccine; immunise; detection; artisense;

This sequence represents an H. pylori cytoplasmic protein. Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for acid sequences, and corresponding proteins, are also useful for meleic acid sequences for immunising subjects against H. pylori or for use in detecting the presence of Helicobacter species in a sample. Antisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of 2000 bp. Purified DNA care blunt-ended and ligated to unique BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary. Therefore the linkers will not concatemerise nor will the cut vector re-ligate tiself easily. The linker-adapter inserts were ligated to each of the 20 pWPX vectors to construct a series of shotgun subclone libraries. The number for this sequence was obtained from the related specification,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ó

```
The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP30 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                       Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                                                                                                                                                                                                                                                                                                                                    This sequence represents a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ArCC 5679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroducdenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      NYNKKTETTLIEGNMLSKILERSLEEMDDEEVKEMCDELSIKNTDNL---NROALSAATL 154

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP56 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    132

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                 Movel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an liminar ersponse. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcars, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life cycle or inhibit S. epidermidis infection. N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO web site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    48 SGAEGTRVEDIMARIATKLGYPESNSFVTNTVIEFVLHNEAYPRL-----YRIKIRDT 100

PIR 78:\* 1: pir1:\* 2: pir2:\* 3: pir3:\* 4: pir4:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastrits, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. PQE/HP30 protein
Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                 HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.

                                                The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, wirulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

The present sequence is a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori infe cycle activators or inhibitors. The genomic sequence of H. pylori (ARCC 5679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for open teast 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents an H. pylori cytoplasmic protein. Helicobacter pylori has been strongly linked to chronic gastritis and duodenal ulcer disease. The nucleic acid sequences of the invention are used to evaluate compounds, especially activators or inhibitors of bacterial life cycle, for the ability to bind an H. pylori nucleic acid sequence. The nucleic acid sequences, and corresponding proteins, are also useful for generating vaccines for immunising subjects against H. pylori or for use in detecting the presence of Helicobacter species in a sample. Autisense nucleic acid sequences of these sequences are used to inhibit expression of a gene from Helicobacter species. H. pylori whole genomic DNA was isolated and nebulised to a median size of 2000 bp. Purified DNA fragments were blunt-ended and ligated to unique BstXI-linker adapters in 100-1000 fold molar excess. These linkers are complementary to the BstXI-cut pMpX vectors, while the overhang is not self-complementary. Therefore

the linkers will not concatemerise nor will the cut vector re-ligate itself easily. The linker-adapter inserts were ligated to each of the 20 pWPX vectors to construct a series of shotgun subclone libraries. The purified DNA samples were then sequenced. Note: The ORF/protein reference number for this sequence was obtained from the related specification, W09640893
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          100

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents a H. pylori cytoplasmic protein. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The genomic sequence of H. pylori (ARCC 56679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for DR omputer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli hosts
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTGACCAGCTCCATAGAATACAAAAGGCATGGCGATGATTACGCTAAATACGCAGAAAGA 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     99
                                                               The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmacoutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcars, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of the incobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP30 plasmid DNA encoded protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GlyValLeuTyrLysGluIleLeuCysAspValCysAspLysLeuLysValAsnTyrAsn 100

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with telicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastrif cancers such as adenocarcinoma, and low grade B peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of the phicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. pQE/HP56 plasmid DNA encoded protein
                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ATGGCATACAAATATGATAGAGACTTGGAATTTTTAAAGCAATTGGAATCTAGTGATTTA

The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, Dromic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for
                                                                                                                                         New isolated Helicobacter polynucleotides - used to develop products for
the diagnosis, prevention and treatment of Helicobacter infections and
gastrointestinal diseases.

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 157 GATTACGCTAAATACGCAGAAAGAATCGCTGAAGAGTTGCAATACTATGGGAGCAATAGT 216
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GIAACCATACCGGCATGCATTGTGGTTGCCACTTTACGCCTAAAAACACAGGAAGCCAAT 726
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          50
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  il Helicobacter proteins, HP30 and HP56, and nucleic acids encoding proteins, useful as vaccines for raising immune response in animals.
                                                                                                                            HP30; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ValThrileProAlaCysileValValAlaThrLeuArgLeuLysThrGlnGlaAsn

The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphona. The invention is useful as reagents for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TIGGAAGAAIGGAIGAIGAAGAAGIGAAGAAAIGIGGGAIGAAITAICCAIAAAAAC 420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invertion relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating a disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B cell lymphoma. The invention is useful as reagence for clinical or medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21 TyrGlnLeuAlaValIleValAlaAsnAlaValAlaLysThrIleLeuGlyArgGlyLeu 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          el Helicobacter proteins, HP30 and HP56, and nucleic acids encoding proteins, useful as vaccines for raising immune response in animals.
                                                                           E230; HP56; immune response; therapy; Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lympioma; virulence; antibacterial; gastric cancer; immunostimmlant; cytostatic; peptic ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        433 AACAGACAAGCCTTTAAGCGCGGCGGCGACTTTAAAGTGGGGGGGTTTTAAATCT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  medical diagnosis of Helicobacter infections and for scientific research on the properties of pathogenicity, virulence and infectivity of Helicobacter, as well as host defense mechanisms. The present sequence is Helicobacter sp. HP30-derived peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel Helicobacter proteins, HP30 and HP56, and nucleic acids encoding the proteins, useful as vaccines for raising immune response in animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to Helicobacter HP30 or HP56 polypeptide and peptides derived from them. The invention is useful for producing an immune response. It is useful for preventing, treating or ameliorating disorder or disease associated with infection of an animal with Helicobacter. Pharmaceutical composition and vaccines comprising the sequences of the invention is useful for treating type B gastritis, peptic ulcers, gastric cancers such as adenocarcinoma, and low grade B ell lymphoma. The invention is useful as reagents for clinical or
                              HP30, HP56; immune response; therapy, Helicobacter infection; vaccine; type B gastritis; antiinflammatory; adenocarcinoma; defense mechanism; low grade B cell lymphoma; virulence; antibacterial; gastric cancer; immunostimulant; cytostatic; peptic ulcer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATGGCATACAAATATGATAGAGACTTGGAATTTTTAAAGCAATTGGAATCTAGTGATTTA

The present sequence represents a breast cancer-associated protein fragment for use in a method for diagnosing breast cancer in tissue or body fluid by detecting one or more breast cancer-associated protein(s). Alternatively a nucleic acid encoding a breast cancer-associated protein is detected in the sample by the use of a nucleic acid probe. The breast cancer-associated protein is detected in the sample by the use of a nucleic acid probe. The breast cancer-associated proteins, encoding nucleic acids and antibodies are useful in diagnostic assays and kits for breast cancer detection. The proteins are also useful in screening for inhibitory compounds and monitoring effectiveness of treatments. The antibody, or pharmacoutical compositions containing the antibody or the inhibitory compound, can be administered to patients to treat breast cancer. The methods allow reliable and early diagnosis of breast cancer, or prediction of its but not in non-cancerous breast cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Diagnosing breast cancer by detecting a breast cancer-associated protein - allows early and reliable diagnosis and treatment monitoring, and antibody or inhibitory compounds useful for treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 32; 47pp; English

Job time : 69 secs The invention relates to novel human breast cancer-associated proteins, and their use in diagnosing and detecting breast cancer. The breast cancer—associated proteins of the invention are nuclear matrix proteins (cancer—associated proteins of the invention are nuclear matrix proteins (soform B (BC-8B, AAB98722), although G other breast cancer—associated nuclear matrix proteins (BC-1, BC-3, BC-4, BC-5, BC-6, and BC-7) were nuclear matrix proteins (BC-1, BC-3), BC-4, BC-5, BC-6, and BC-7) were nuclear matrix proteins (BC-1) are specification). The novel breast cancer—associated proteins are present in the nuclear matrix of breast cancer cells, but are not present in the nuclear matrix of the breast cancer associated proteins (AAB98709-AAB98716), and methods for their use in breast cancer diagnosis. The breast cancer marker proteins of the invention or fragments thereof may be detected in a proteins of breast tissue or blood from an individual. Isolated breast cancer—associated proteins may also be used to prepare antibodies, particularly monoclonal antibodies, which may be used to detect or diagnose breast cancer. Nucleic acids encoding the breast cancer-associated proteins may also be used in the diagnosis and detection of breast cancer, and in the isolation of DNA or protein sequences which may interact with breast cancer-associated nuclear matrix proteins. The present sequence represents a portion of breast cancer-associated protein BC-2 referred to in an exemplification of the invention
